                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Total number of hits satisfying chosen parameters:
         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                   3879

Sequence 4, Application US/10003295

| Patent No. 6686187
| Patent No. 6686187
| GENERAL INFORMATION:
| APPLICANT: GAN, Weiniu et al.
| TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
| TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND
| TITLE OF INVENTION: THEREOF
| FILE REFERENCE: CL001183DIV
| CURRENT APPLICATION NUMBER: US/10/003,295
| CURRENT FILING DATE: 2001-12-06
| NUMBER OF SEQ ID NOS: 4
| SOPTWARE: FastSEQ for Windows Version 4.0
| SEQ ID NO 4
| LENGTH: 822
| TYPE: PRT
| ORGANISM: Homo sapiens

A;Title: Structure of the feline c-fes/fps proto-oncogene: genesis of a retroviral onc
A;Reference number: A27824
A;Molecule type: DNA
A;Residues: 1-820 <ROE>
C;Genetics:
A;Gene: fes/fps
C;Superfamily: protein-tyrosine kinase fps; protein kinase homology; SH2 homology
C;Keywords: ATP; autophosphorylation; phosphoprotein; phosphotransferase; proto-oncoge:
F;458-543/Domain: SH2 homology <SH2>
F;557-819/Domain: protein kinase homology <KIN>
F;565-573/Region: protein kinase ATP-binding motif
F;588/Active site: Lys #status predicted
F;711/Binding site: phosphate (Tyr) (covalent) (by autophosphorylation) #status predic
                                                                                                                                                                                                                                                                                                                                                            ક
                                                                                                                                                                                                                                                                                                                                                                                          В
                                                                                                                                                                                                                                                                                                                                                                                                            S
                                                                                                                                                                                                                                                                                                                                                                                                                                     유 성 유

Ye J, (first entry) Di Francesco V, protein; 752 Beasley EM; A

Nucleic acids encoding a proto-oncogene tyrosine kinase, prevention, diagnosis and treatment of e.g. leukemia and useful for the lung tumors.

WPI; 2002-138497/18. N-PSDB; ABA94500, ABA94501.

Claim 1; Fig 2A; 49pp; English.

The invention provides isolated nucleic acid sequences encoding a protooncogene tyrosine kinase (poTK). The poTK poJYnucleotides and protein may
be used in the prevention, diagnosis and treatment of diseases associated
with inappropriate poTK expression, such as lung and kidney tumours,
leukemia and stomach adenocarcinoma. poTK may be used to treat disorders
associated with decreased expression by rectifying mutations or deletions
in a patient's genome that affect the activity of poTK by expressing
inactive proteins or to supplement the patients own production of poTK.
The encoded poTK may be used as an antigen in the production of
antibodies against poTK and in assays to identify modulators of poTK
expression and activity. The anti-poTK antibodies and antagonists may be
used to down regulate expression and activity and as diagnostic agents

The invention relates to a newly isolated peptide sequence of a human CC kinase that is related to the proto-oncogene tyrosine kinase subfamily. CC The activity of the kinase of the invention may be described as, CC cytostatic, antiarteriosclerotic, antiinflammatory and antipsoriatic. CP peptides of the invention are useful in assays to determine the CC biological activity of the protein, in drug screening assays, tissue CC typing and pharmacogenomic analysis. They are also useful in treating or CC diagnosing disorders characterised by an absence of, inappropriate, or CC unwanted expression of the protein, such as inflammation, cancer (e.g. CC leukaemia, lung tumours, kidney tumours or stomach adenocarcinoma), CC arteriosclerosis, and psoriasis Nucleic acid molecules of the invention CC are useful as probes, primers and chemical intermediates in biological CC assays. The peptide and nucleic acid sequences are useful as models for the development of human therapeutic targets, aid in the identification of the development of human therapeutic targets, aid in the identification CC therapeutic proteins and serve as targets for the development of human therapeutic protein activity in cells and CC tissues that express the protein. The protein activity in cells and CC tissues that express the protein. The protein of the invention may also be useful in gene therapy. The gene encoding the protein of the invention cCC represents the human chromosome 15. The current sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New human kinase protein, useful for treating or diagnosing disorders associated with an absence of, inappropriate, or unwanted expression the protein, e.g. inflammation or cancer, in drug screening assays and
